Sprint retrospective?

Extended sprint to next week, will hold retrospective then

DevOps:

We need to add in a code quality check to the CI/CD pipeline via one of these tools:

- <https://github.com/marketplace/actions/codacy-analysis-cli>
- <https://codeclimate.com/>
- <https://www.codefactor.io/>

(There are many others, but these are what Sanat mentioned)

Notes from meeting with Sanat:

Everything is going to really start picking up starting next week. There is a lot going on, but now is not the time to slack. We need to ensure everyone is still on the same page, as we really begin working on these new enhancements / features.

Week 10 should ultimately be the cutoff for introducing any more code changes into our app. This means we should be aiming to wrap up our work by week 8.5 - 9 and thus have about **3 good weeks of coding**.

At that point, we should be putting a collective effort into testing. This doesn't mean that we should save all unit tests for the end though. We should be writing our tests as we release enhancements / features.

Project Issues / Sprint Planning:

Go over any new issues added in and attempt to gauge the size / difficulty.

Any particular issues people want assigned to them?

UI discussion:

Pop up report modal after user returns to homepage

Check if task title stays as current task when you go on break but you're still on the same time

Report icon stays even if you don't have a report, have message saying that you don't have any sessions recorded

Change instructions to only show 1 card at a time, revise instructions to be more concise
