

Everyone present:

Todo:

Not finished from last sprint (Highest priority):

- End to end testing - Mark Chris (Long)
- Background Notifications - Alan Luke (smaller) - Luke will make PR
- Keyboard accessibility - Liam Luke (smaller) - link with mac user
- Onboarding documentation - Mesa Liam (medium)
- Timer throttle bug - Chris Luke Alan (could be small could be large)
- 100% HTML valid - Xingyu Alan (longer) - on hold until after UI changes
 - W3 validator
 - Divitis

Medium priority:

Assigned teams to handle main page and timer page redesign

Powell changes (main page organization and timer page organization) *** (medium)

- Main page redesign Xingyu Mark Luke Liam
 - Shrink top left text/change to brand icon (Mark Xingyu)
 - Center enter name/resume task button (Liam Mark)
 - Reorganize where the 25 min work/5min break will go (Liam Luke)
 - Remove home icon from home page (Xingyu Liam)
 - Create new session button when no resume session button is available (xingyu Luke)
- Timer page Steven Alan Chris Mesa
 - Display remaining planned pomos - Meshach (medium)
 - Shrink top left/change to brand icon (handled by main page)
 - Delete pomodoro/Make break title disappear when timer starts (small)
 - Change "current task:" to "focus:" before/during a pomodoro session
 - Make timer bigger when this happens (Steven)
 - ~~Graph makes live edits while you work on tasks~~ (medium) (Alan)
 - Display graph when only meaningful number of data points (> 1)
 - Investigate a new graph API
 - Add message for finishing task when all pomos are done (medium) (Steven)
 - If user used up more than half of pomodoro session for task when timer runs out, add 1 to actual Pomos for that task, otherwise, don't add anything
 - Update website favicon to match pomodoro timer state + taskbar title (small) (Alan)
 - Add new logo
- UI themes Mesa Chris Mark (Long)
 - At least 1 new background (bright color)
 - Use different css classes, add them programmatically
 - Some new icons for tomatoes (3 new things?)

Low priority:

- Audio notifications *
- Analytics? (low priority for now)
- Repository clean up (powell notes)
 - Cleaning up node.js package files

Alan Luke (small - medium)

Architectural decisions

- Show remaining planned pomos only before the user starts timer
 - Reduce clutter with the finish task button
 - If the user wants to see remaining pomos during task, they can look at task list
- Delete pomodoro/break title when timer starts
 - Clutters screen when user is working
 - User should still be able to identify what type of session they're on without relying on color of tomato
- Change title before/during a Pomo session from "Current task: " to "Focus:"
 - Title stays as current/next/final task during break
 - Made this change to reduce clutter while user is working
- Add message when timer runs out for pomo session and actual pomos == expected pomos
 - Will ask user to continue or move on to next task
 - How do we increment Pomos when a user finished a task early during a Pomo session?
 - If the user spent more than half of the session on a task, increment pomos for that task
- Will keep unit of stats graph as sessions for now
 - Considered changing the unit to be individual tasks, but realized that it would be awkward if the user worked on the same task in multiple sessions

Planned out new interfaces for home page and timer page on group Figma
