Problems encountered/Enhancements needed with webpage
- Landing page instructions were not rendering properly on different sized viewports
    - Solution: Remove instructions from the landing page
    - Add an instructions pop-up modal that users can access by clicking on a menu icon. Have the modal automatically pop-up once the user enters their name and enters the task list view.
- Users might want to view their progress during a break. The report page also is clunky/has some browser navigation bugs
    - Solution: Remove the report page
    - Add a report pop-up modal that users can access by clicking on a menu icon. Have the modal automatically pop-up once the user finishes their session and returns to the homepage
- Current web page doesn't work if the internet disconnects while using the website
    - Solution: Make the webpage PWA compatible so timer will still run even if disconnected from the internet
- Notifications only worked if you were on the web page or you were on a Mac
    - Improve background notifications so that if a user is off the webpage (for instance during a break) the timer will alert them when finished.
- Users can't move on to the next task if they finished a task in the middle of a session
    - Solution: Add a "finish task" button that allows users to finish the current task in the middle of a Pomo session
- The current webpage does not work with keyboard controls
    - Solution: Add keyboard controls so users can operate the website using only a keyboard
- The Electric Pomato logo lead back to the homepage which was not clear to users
    - Solution: Remove the functionality from the logo
    - Add a dedicated homepage button that prompts the user if they're in the middle of a session
- Certain disabilities have no access to our webpage (EX: blind people)
    - Solution Make webpage 100% HTML valid to be compatible with screen readers
- Bug: New task list item content is reset after editing a new task item

Other Proposed ideas
- Update the website title with the current timer value if the timer is running

- Add different UI themes so users can pick different colored backgrounds or icons that are different from a tomato for their timer
- Add audio notifications for timer that can be controlled from settings
-

Planned UI changes:
- Redesign homepage to remove instructions/better make use of space
- Add menu bar with icons for instructions, settings, stats/report, and home
  - Settings button - opens settings pop-up modal with options for:
    - Pomo Timer duration
    - Short Break duration
    - Long Break duration
    - Settings button will recommend default length for pomo sessions and short/long breaks to stay truthful to the Pomodoro technique (25 min session, 5 min short break, 15 min long break)
  - Instructions button - opens instructions pop-up modal with previous 3 cards
    - Arrange cards vertically to maintain the same appearance on different sized viewports
    - Automatically pop-up modal when user enters name for the first time
  - Stats button - opens stats report modal with chart from done.html
    - Automatically pop-up modal when user ends a session
  - Home button - go to homepage
    - Prompt user if user clicks on home button in the middle of a session
  - Menu bar will be hidden when a user visits the webpage for the first time to reduce clutter
- Title changes
  - Move title to center of webpage to make room for menu bar, allow user to more easily focus on current task
  - Change title to display whether a user is on a short or long break
    - When a user starts the break timer, title will display "Short/Long Break" and the current/next task title
  - If the user is currently waiting for/on a task, task title will be "Current Task:"
  - If the user is about to move on to the next task, task title will be "Next Task:"
  - If the user is currently waiting for/on the final task, task title will be "Final Task:"
- Add finish task button to task page
  - The Finish task button will prompt the user to confirm if they want to move on
  - Finish task button will change to end session button if user is on final task
- Change prompt at end of session to only allow user to go back to homepage
- Remove done.html (functionality moved to stats modal)
